DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claims 3, 16 and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
2. The "phosphites" is misspelled in all three claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-4, 6, 7 and 16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gelbin 6,569,927, in view of Hamada et al. 5,362,572.
5. Gelbin discloses a thermoplastic resin a hindered phenol, an aromatic amine and a lactone in claim 1, polyisobutylene in claim 9, hindered phenols in claims 23-26 and fillers column 15, lines 52-64. In the paragraph overlapping columns 2 and 3, Gelbin cites Kronke, C. "Proceedings from Polyolefins X International Conference; pp. 555-569 (1997)", which discloses, inter alia, an extremely active stabilizer for polyolefin processing based on a benzofuranones (lactone) derivative. The author states that, when used in combination with phenolic/phosphite antioxidant blends, new levels of performance are achieved. Thus the addition of phosphites to the composition of Gelbin is obvious. It is also obvious to select polyisobutylene from a list of equivalents.

Since the criticality of the claimed Tg and surface tension is not elucidated in the specification, the examiner holds that these limitations are obvious also. Hamada et al. teach a laminate of polyolefin and polyisobutylene in claims 1-8, fillers in column 4, lines 29-34, phosphite stabilizers in column 6, line 41 and hindered phenols in the paragraph overlapping columns 6 and 7. It would have been obvious to one having ordinary skill in the art, at the time the invention was made, to use the composition of Gelbin for the polyisobutylene of Hamada et al. because of its excellent stability. Wrapping tape is the intended use and as such it has no patentable significance.

Allowable Subject Matter

6. Claims 8-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter Szekely whose telephone number is (571) 272-1124. The examiner can normally be reached on 6:10 a.m.-4:40 p.m. Tuesday-Friday.
